Leaf-spine underlay network. Note: Using a leaf-spine network in the data center is considered a best practice. With Z9264F-ON switches as spines and two leaf switches per rack, this topology scales to 32 racks. For more leaf-spine network information, see Dell EMC Networking Layer 3 Leaf-Spine Deployment and Best Practices with OS10. There are some BGP configuration differences in this guide to enable the BGP EVPN VXLAN feature.

The following concepts apply to layer 2 and layer 3 leaf-spine topologies:

- Each leaf switch connects to every spine switch in the topology.
- Servers, storage arrays, edge routers and similar devices always connect to leaf switches, never to spines.

The layer 2 and layer 3 topologies each use two leaf switches at the top of each rack configured as a Virtual Link Trunking (VLT) pair. VLT allows all connections to be active while also providing fault tolerance.
